INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/JP02 / 12022

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	1 - 4	YES
	Claims		NO
Inventive step (IS)	Claims	1 - 4	YES
	Claims		NO
Industrial applicability (IA)	Claims	1 - 4	YES
	Claims		NO

2. Citations and explanations (Rule 70.7)

The subject matter of claims 1-4 is a two-dimensional weak radiation detector which consists of a photoelectric conversion part, an amplification module, a number of electron amplification parts, a detection module, an operation control part and a light incidence position calculation part.

The operation control part operates each of electron detection parts based on an orthogonal modulation pattern. Photoelectron incident position is calculated by inversion from the obtained data, and the position of the photons incident on the photoelectric conversion part can be obtained.

The documents cited in the international search report don't teach these features. In particular, the operation control part and the calculation part are not disclosed in the documents.
